

## **From the Editor**

Even as time wears out everything it touches, it also brings novelties and changes the face of things it encloses. One realm where change is well-noticed is technology; its rate increasingly accelerated, its reach broadening ever more. Life and technology increasingly being bound makes technology that much more influential. But, technological improvement does not occur everywhere. While some countries continuously invent and develop new methodologies and technologies, some have difficulty in its use and adoption. It is the duty of those who work in the raising of science and technology to contribute with improvements and changes.

In this vein, it is a great honor to serve as editor of the Turkish Journal of Electrical Engineering and Computer Sciences (TJEECS). I will do my best to carry out this important responsibility. I would like to thank Prof. Dr. Kemal Leblebiciođlu for his remarkable efforts in bringing this journal to the present day. I also would like to express my best wishes to Dr. Abdurrahman Aliy in his newly assigned job as the Head of Department of Academic Publishing. I also thank Adnan Bahadır, Erol Kılıç, Dale A. Ross, Russell Fraser, Osman Topaç, Abdullah Can, Cemal İçöz, Hayriye Özkan and Meral Esi for their significant contributions to the preparation, printing and publishing of the journal and am very happy to be working with them.

Our goal is to publish in the Turkish Journal of Electrical Engineering and Computer Sciences articles that bring new invigoration and applications to Electrical engineering, Electronics Engineering, Computer Engineering and Sciences, and Biomedical Engineering. We welcome manuscripts that bring new and fresh expositions and understandings to these fields and, hopefully, together with broad appeal and accompanying impact.

The journal is going to publish new ideas and applications. Manuscripts that describe obvious results will be disregarded in favor of those that shed new light on a problem. The journal is open to methods or expositions that bear reason, results and insight that are well expositied and deserve a broader exposure.

**Prof. Dr. Sadık KARA**

**Editor-in-Chief**

**Turkish Journal of Electrical Engineering and Computer Sciences**
